

OLYMPUS®

POLARIZING MICROSCOPES

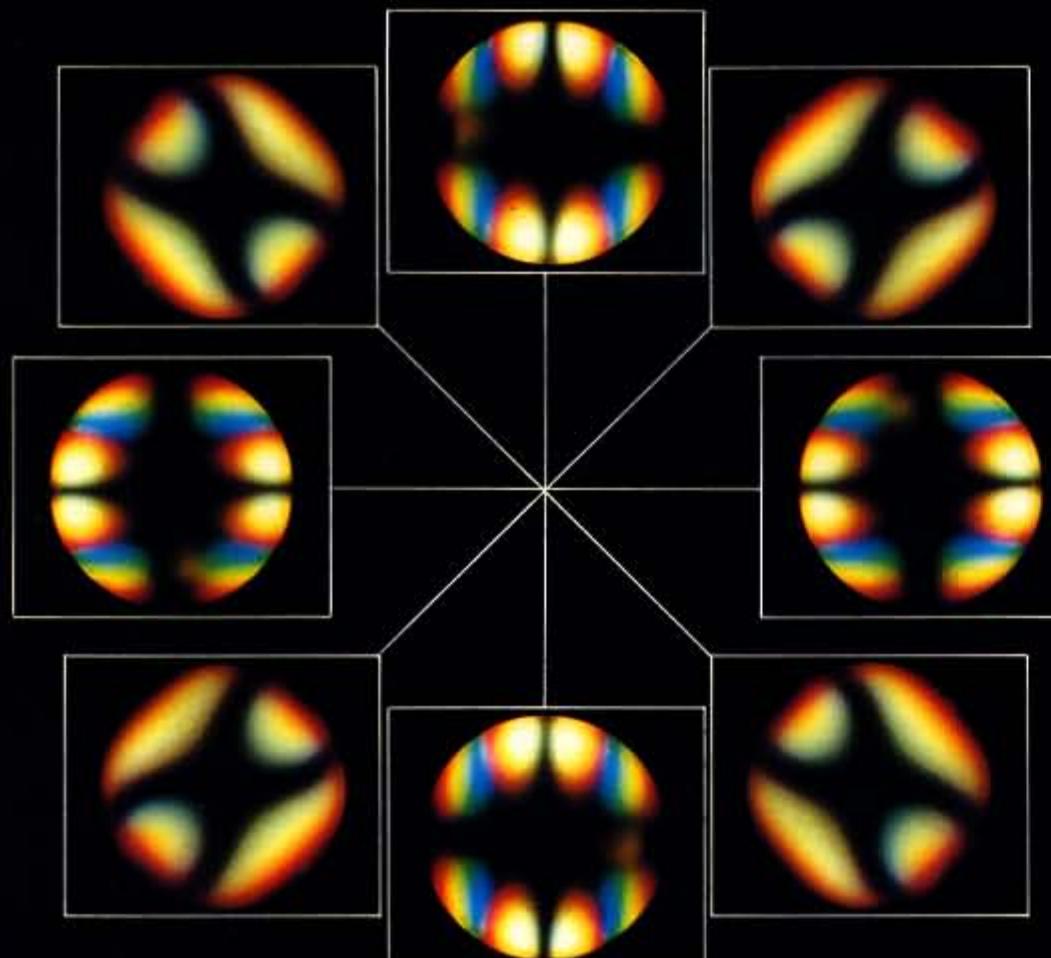

Polarizing microscopes are essential for research on materials with birefringent properties. The importance of polarizing microscopy, which has been employed widely in mineralogy and petrology, is continually expanding due to increasing applications in the fields of chemistry, pharmacology and research on artificial fibers.

Together with a new series of long barrel (LB) objectives formulated for biological microscopy, Olympus has designed a range of strain-free long barrel objectives for the polarizing microscope which share the outstanding features of the biological LB objectives, such as high resolution, excellent image contrast, flatness, etc.

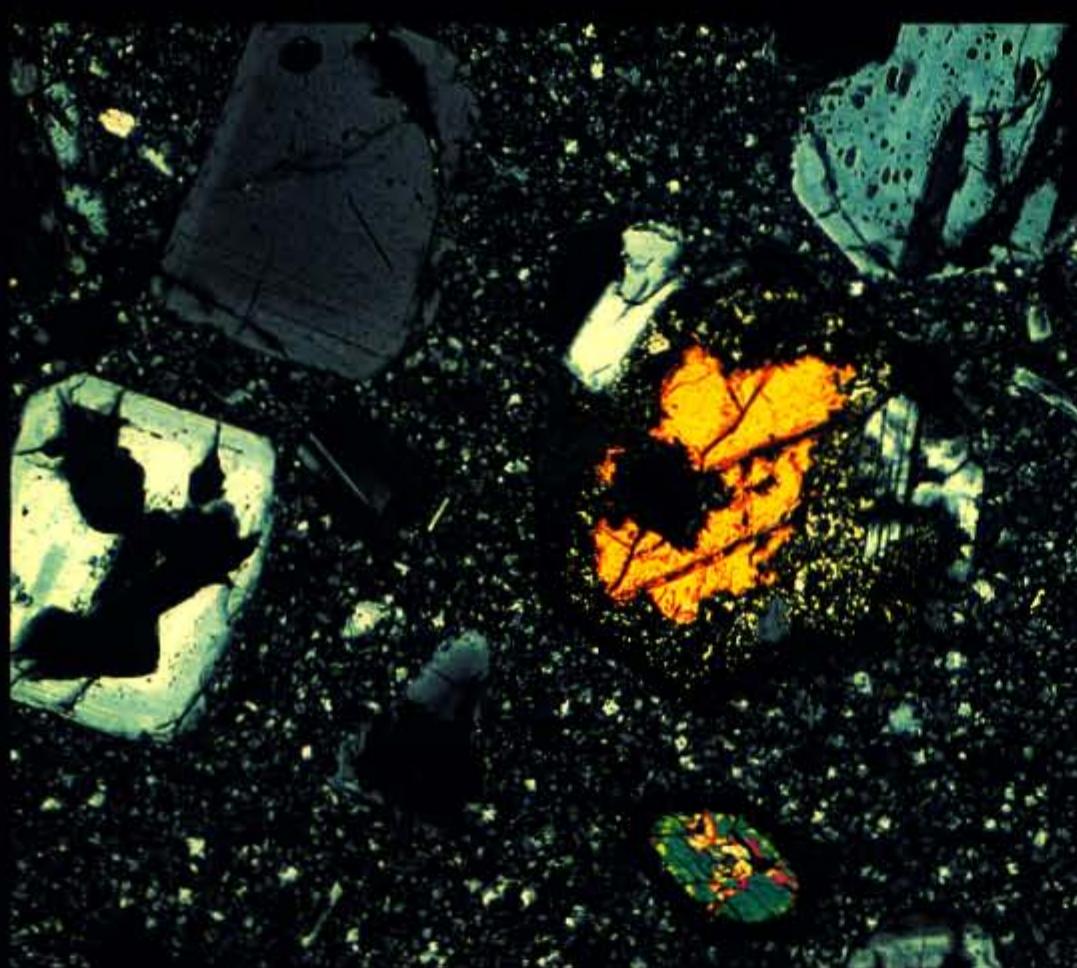

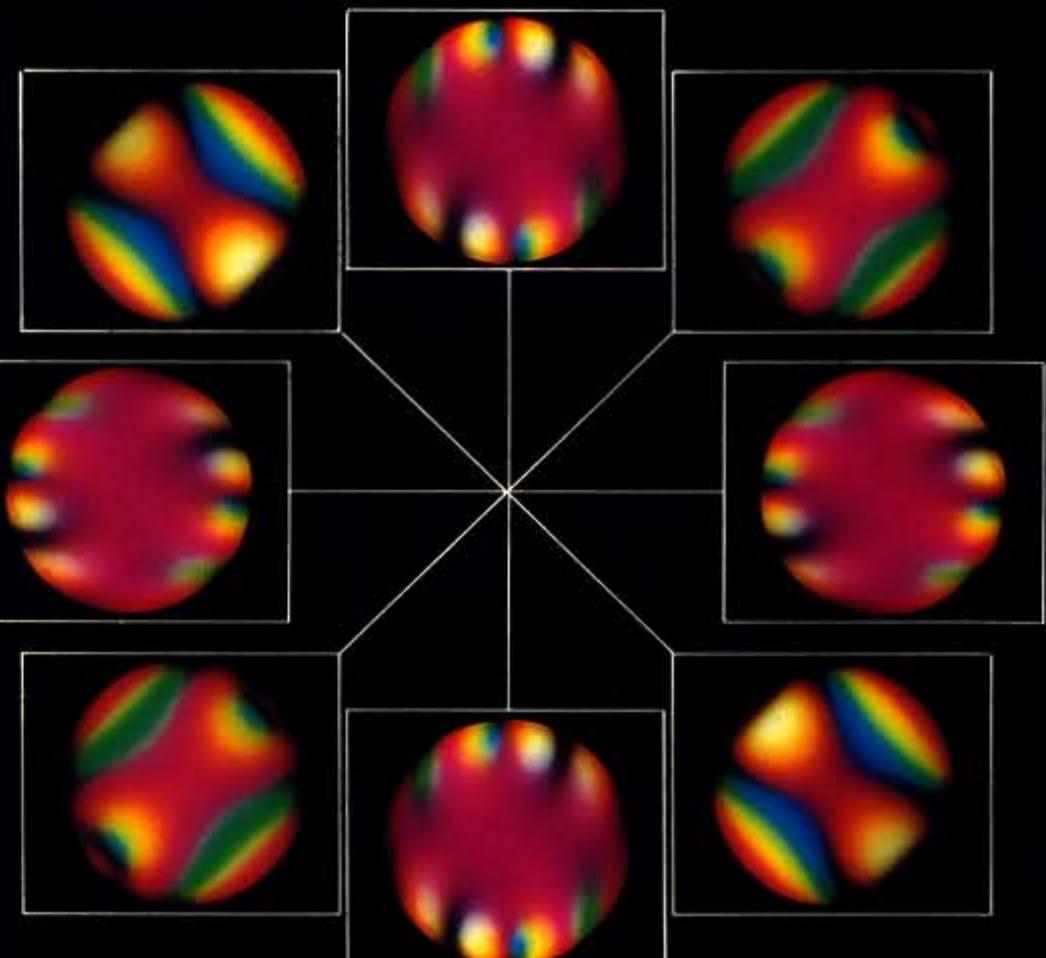

Olympus has integrated these new polarizing LB objectives

with the Model VANOX (AH), the microscope that represents the pinnacle of Olympus microscope design, and with the highly sophisticated new Model BHS microscope. These new integrated polarizing system microscopes are now available as the Models AHP and BHSP. Additionally, the Model CHA-P microscope, utilizing conventional strain-free objectives, is available as a highly economical polarizing microscope for educational use. Based on over 60 years of experience in microscope design and manufacture, Olympus is confident that these newest Olympus polarizing microscopes fulfill the demand for a diverse range of superior quality.

Conoscopic figures observed with a cleavage-flake of muscovite

Same as left, but with a tint plate inserted

Andesite PO D Plan 10 \times , NFK 3.3 \times .

Vitamin C PO D Plan 20 \times , NFK 3.3 \times .

Maximum precision for superlative research results

AHP

Polarizing Intermediate Attachment

Magnification 1X, accepts various compensator plates(20x6mm). Built-in, slide-out filter analyzer, rotatable through 180°, graduated in increments of 2°, with locking knob and depolarizer. Bertrand lens is mounted in rotating turret with focusing ring.

Revolving Nosepiece

Quadruple, with individual objective centering devices.

Strain-free Objectives

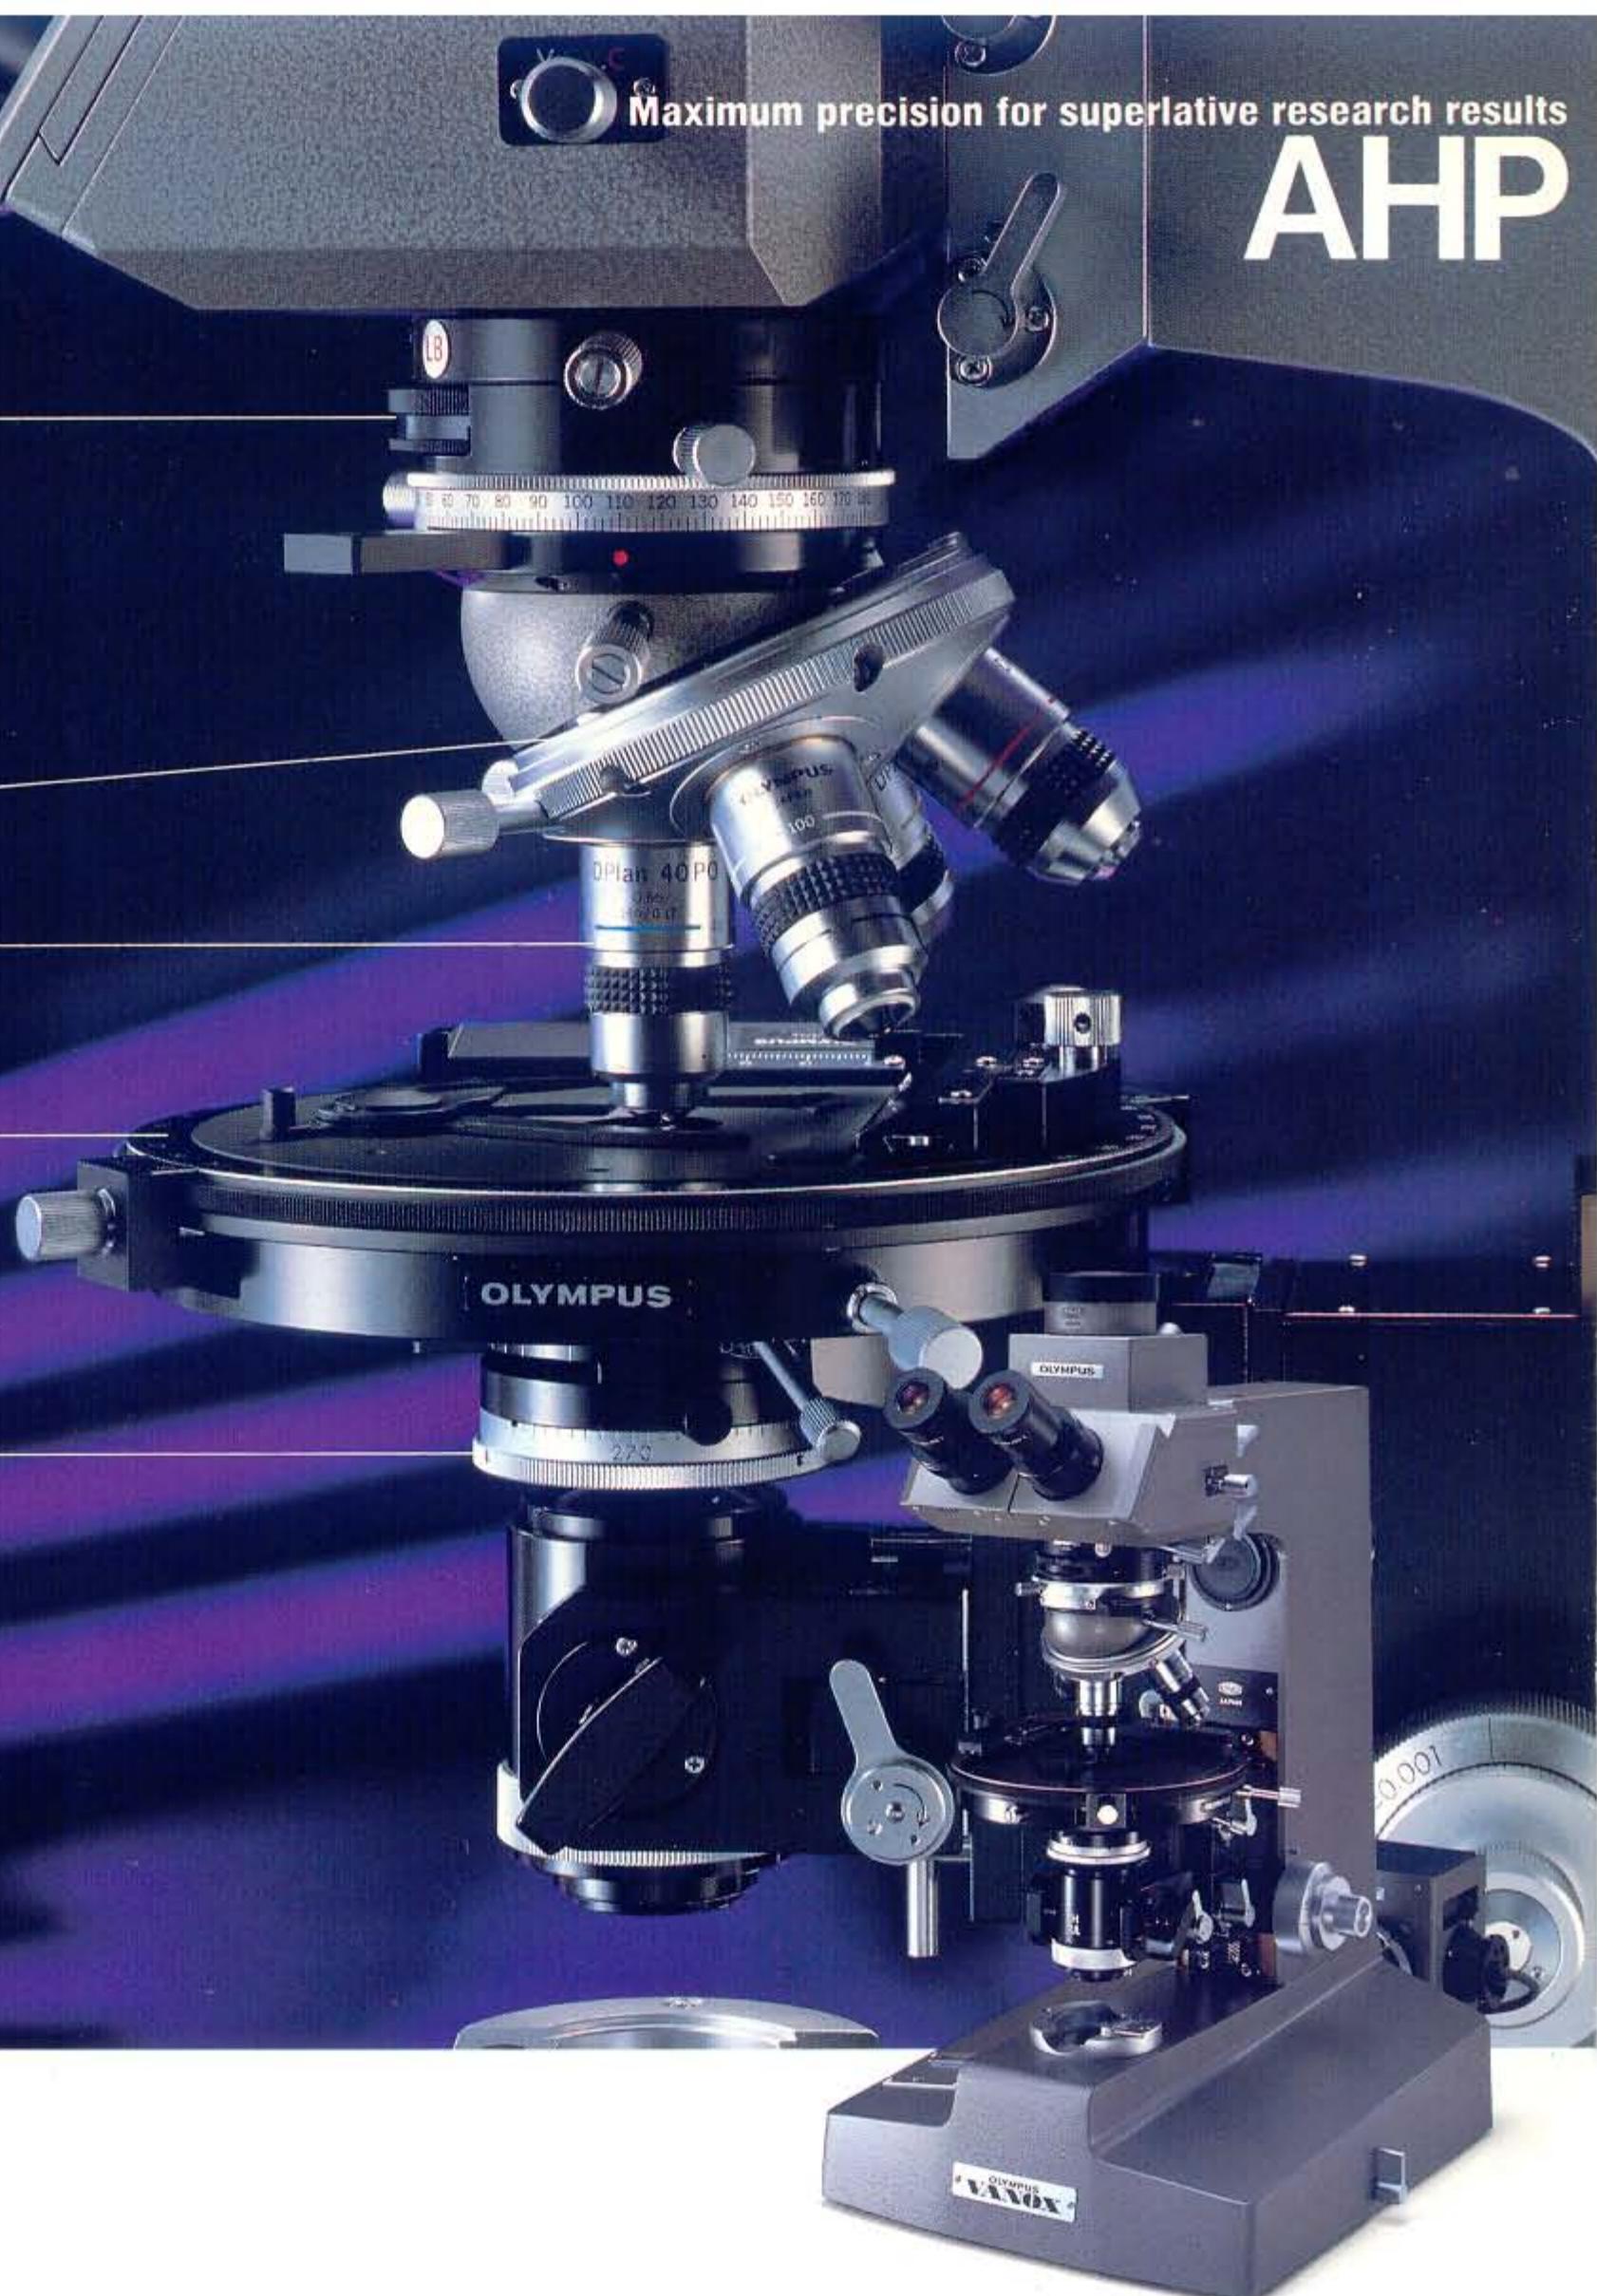

PO D Plan or PO D Achromat

Circular Rotatable Stage

Rotatable through 360°, with 2 verniers reading to 6'. Outside diameter 170mm. Clamping screw for stage rotation. Click stop every 45° starting at any position. Two centering screws.

Polarizing Condenser

Swing-out top element, N.A. 0.9—0.25. Aperture iris diaphragm and graduated N.A. scale. Built-in polarizer, rotatable through 360°, with scale graduated in 5° increments. Click stop at position "0", can be fine adjusted.

Berek Compensator AH-CTP-3

Tint Plate AH-TP-530-2 and
1/4 Wavelength Retardation Plate AH-TP-147-2

**Attachable Mechanical Stage AH-FMP
(for AHP, BHSP)**

Working range: 30mm x 30mm, with vernier scale reading to 0.1mm. Adjustable specimen holder, spring-loaded, for 28mm x 47mm metallurgical slides and 26mm x 76mm biological slides.

Ideal for routine and research use

BHSP

Polarizing Intermediate Attachment

Magnification 1X, accepts various compensator plates (20x6mm). Built-in, slide-out filter analyzer, rotatable through 180°, graduated in increments of 2°, with locking knob and depolarizer. Bertrand lens is mounted in rotating turret with focusing ring.

Revolving Nosepiece

Quadruple, with individual objective centering devices.

Strain-free Objectives

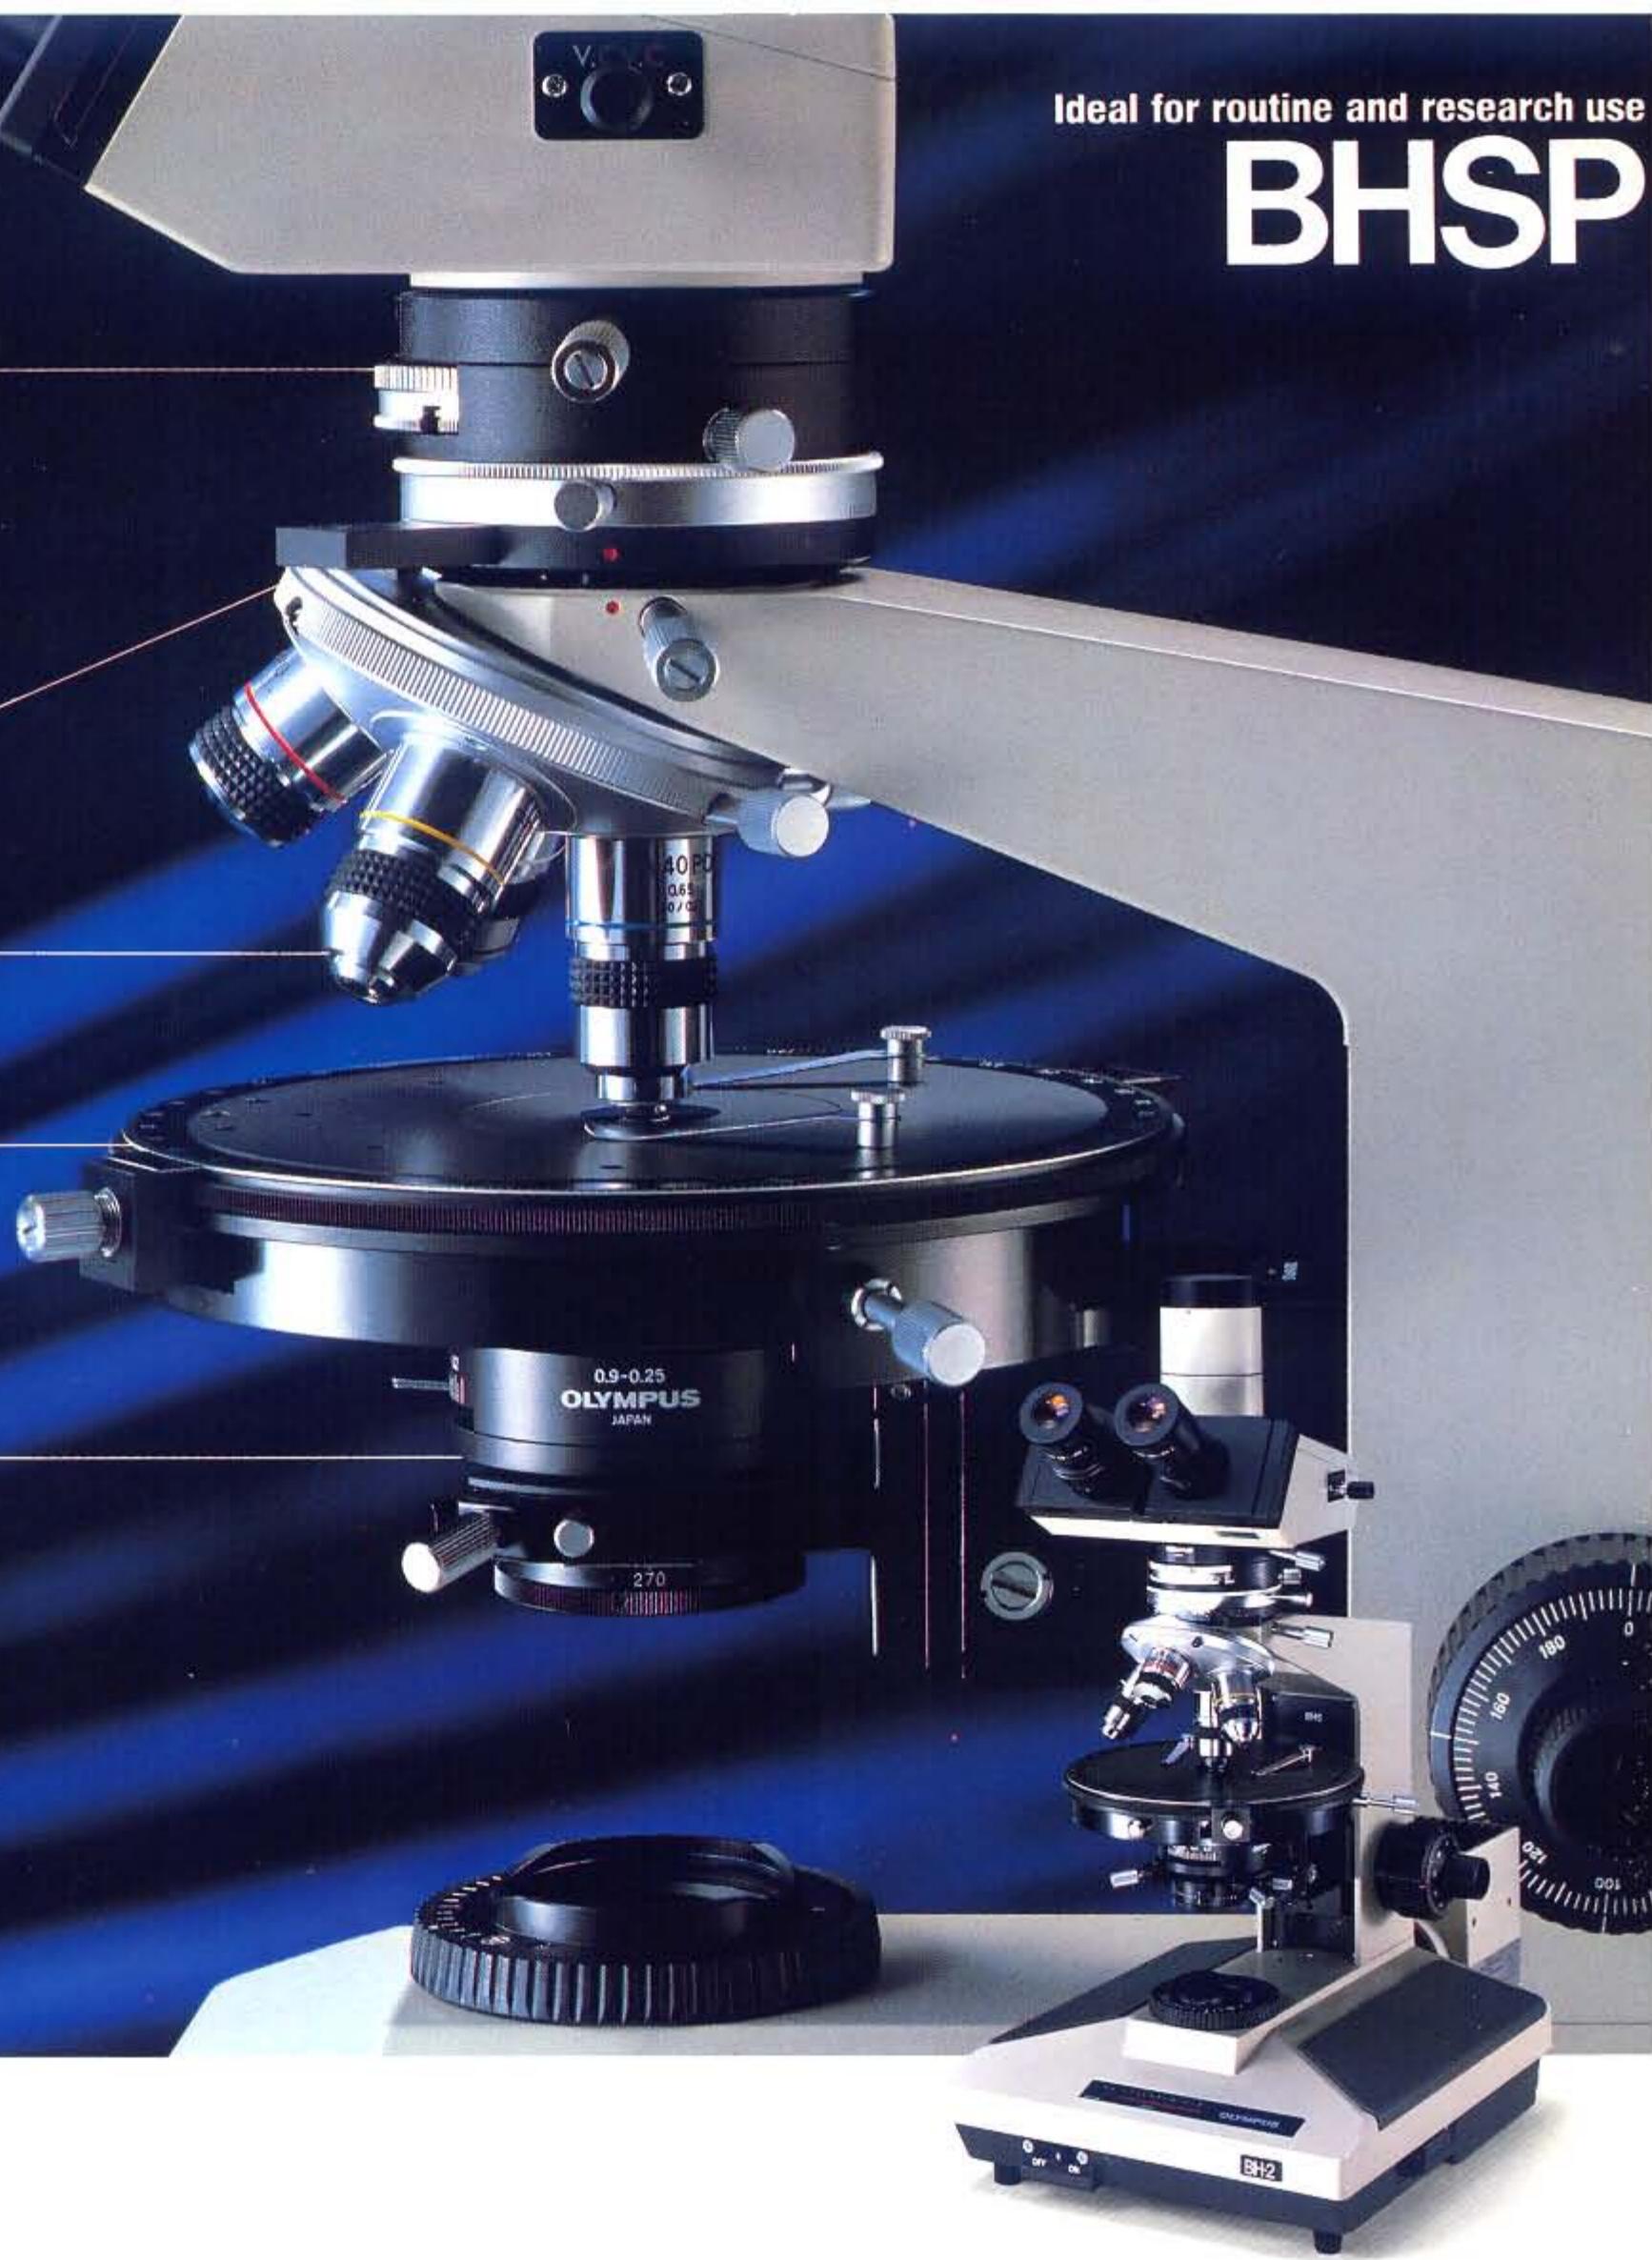

PO D Plan or PO D Achromat

Circular Rotatable Stage

Rotatable through 360°, with 2 verniers reading to 6'. Outside diameter 170mm. Clamping screw for stage rotation. Click stop every 45° starting at any position. Two centering screws.

Polarizing Condenser

Swing-out top element, N.A. 0.9—0.25. Aperture iris diaphragm and graduated N.A. scale. Built-in polarizer, rotatable through 360°, with scale graduated in 5° increments. Click stop at position "0", can be fine adjusted.

Objectives and Eyepieces

Two series of strain-free LB objectives for transmitted polarized light microscopy are available: PO D Ach with excellent resolution and PO D Plan with excellent resolution and image flatness.

Eyepieces have been newly designed in perfect conformity with the objectives, and their visual fields are wider than ever before. Three 10X eyepieces for viewing are included in the standard outfit. The WHK 10X features a field number of 20, high eyepoint which permits spectacle wearers to look through the microscope without removing glasses, and built-in light guard.

In addition to the standard features of the WHK 10X, the Micro-WHK 10X has a cross line and a micrometer (10mm scale ruled to 0.1mm on horizontal line), while the Cross-WHK 10X has a plain cross line.

The front lens assembly of both of these eyepieces is focusable. The NK 5X and Cross-NK 5X with a field number of 21 are also standard for the AHP.

Economical system—primarily for teaching

CHA-P

Since this system is not
a standard stock item, delivery
time is longer than that for the
other two models.

Polarizing Intermediate Attachment

Magnification 1X, accepts various compensator plates (20×6mm). Built-in, slide-out filter analyzer, rotatable through 180°, graduated in increments of 2°, with locking knob and depolarizer. Bertrand lens is mounted in rotating turret with focusing ring.

Revolving Nosepiece

Quadruple, with individual objective centering devices.

Strain-free Achromatic Objectives

Circular Rotatable Stage

Rotatable through 360°, reading to 1°. Outside diameter 142mm. Clamping screw for stage rotation. Two centering screws.

Polarizing Condenser

Swing-out top element, N.A. 0.9—0.25. Aperture iris diaphragm and graduated N.A. scale. Built-in polarizer, rotatable through 360°, with scale graduated in 5° increments. Click stop at position "0", can be fine adjusted.

The standard CHA-P system incorporates the conventional PO 4X, 10X and 40X strain-free achromatic objectives but it can also accommodate PO 20X and 100X (oil) objectives. Eyepieces used with the Model CHA-P include the Micro WF 10X, which is designed with a cross line and a micrometer and focusable front lens like the Micro WHK 10X, and the WF 10X. Both of these are designed for use with the conventional objectives and have a field number of 18.

*1 The microscope stand, circular rotatable stage and revolving nosepiece are a single unit.

*2 Berek compensator AH-CTP-3 is available as option.

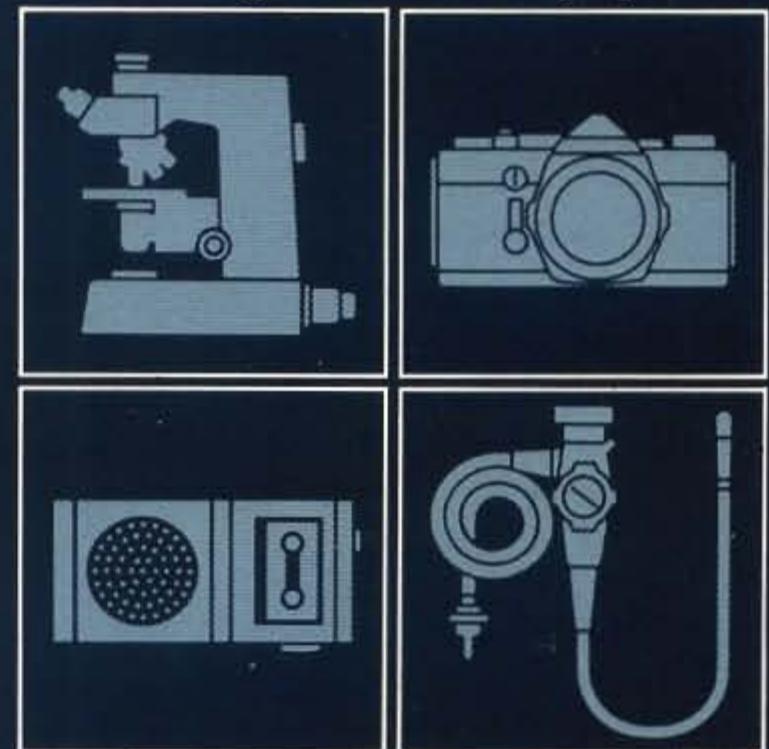

Olympus has a variety of photomicrography attachments available for high quality documentation. The state-of-the-art, fully automatic Model PM-10AD, in which a microprocessor has been integrated for automatic precision exposure, and the Model PM-10M manual photography attachments accommodate not only 35mm film but also $3\frac{1}{4}'' \times 4\frac{1}{4}''$ Polaroid and $4'' \times 5''$ sheet film. For microscopists using only 35mm film, the manual Model PM-6 is an attractive economical option.

An unwavering will to remain at the forefront of scientific discovery, and an uncompromising commitment to quality have made the name of Olympus a synonym for high performance and reliability all over the world. From cameras and microcassette recorders, to microscopes for various applications, fiberscopes, and facsimiles, Olympus has kept abreast of the most advanced technologies and discoveries, constantly striving to develop products which meet the new and more complex needs of our rapidly changing society. Precision engineering, a long experience, and R&D activities tuned to the requirements of man in his search for a better life, have earned Olympus its unparalleled position in the medical profession, in the photographic industry, in the laboratory and the classroom, and in the eyes of all those who benefit from the functionality, accuracy, versatility and economy of its products.
